AI / ML Engineer
Fire AI | Mumbai | 3-6 Years Experience

Would you rather train models in notebooks or deploy production AI that powers enterprise decisions?
Fire AI isn't another BI tool. We're the hypergrowth startup building the world's best decision intelligence platform with **zero churn**, **120+ category-defining brands** (IRCTC, CWC, Faballey, GSN Group), and scaling from **$28.3K to $16M MRR by 2030** with **aggressive global expansion underway**.
We're solving the enterprise analytics crisis where **92% of companies struggle with data analysis** and **70% say static dashboards don't improve decisions**. Our platform delivers **intelligent dashboards, automated reporting, smart alerts (60 seconds vs. 6 days), time series forecasting (94% accuracy), and causal chain analysis** that answers "why" not just "what." **72% of our users are non-technical** (CFOs, ops managers) using conversational AI in **90+ languages**.
Customer quote: *"Feels less like a tool, more like a decision partner"*. We've driven **30% lower losses** for pharma clients and **12% margin recovery** for industry giants. Backed by **Venture Catalysts, IPV, SucSEED**.

What You'll Actually Build
You're not experimenting in notebooks—you're deploying **production ML models** powering **causal chains, forecasting (94% accuracy), and anomaly detection** used by enterprises daily.

- **Design, train, and deploy production ML models** achieving accuracy and performance targets—build end-to-end pipelines from data ingestion through inference serving, implement model versioning, automated retraining, and continuous learning systems
- **Build scalable ML infrastructure**—develop data processing pipelines for feature engineering, implement MLOps workflows for monitoring, drift detection, performance tracking; create A/B testing frameworks for model evaluation
- **Deploy models to production** with comprehensive monitoring and alerting—maintain performance SLAs (accuracy, latency, availability), implement explainability and bias detection frameworks, optimize inference infrastructure costs
- **Integrate ML models** with backend APIs, frontend UIs, and customer analytics dashboards—work with Senior AI Engineers on **agentic systems, RAG pipelines, LLM orchestration**, collaborate with Product Engineering on seamless AI feature delivery
- **Optimize for scale**—compress models for efficiency, reduce inference latency, ensure reliability powering **120+ brands** across **17+ industries** with **text-to-SQL (98% accuracy) and 700+ integrations**

You're Built For This If...

- **Shipped production ML models**—3-6 years deploying models at scale with proven track record building end-to-end pipelines from data to inference
- **Strong ML engineering fundamentals**—Python, PyTorch/TensorFlow, Scikit-learn; experience with MLflow/Kubeflow, Docker, AWS SageMaker/GCP/Azure
- **Production-focused mindset**—optimize for inference speed, memory usage, scalability; implement monitoring, A/B testing, automated retraining ensuring models stay healthy
- **Data engineering skills**—Pandas, SQL, ETL pipelines, feature stores, real-time data processing; collaborate with data teams on feature engineering
- **Team player**—work with Product Engineering, Senior AI Engineers, backend/frontend teams integrating ML seamlessly into customer-facing features

Why Fire AI (The Real Talk)

- **Deploy ML That Matters:** Your models power **causal analysis, time series forecasting, anomaly detection (60 seconds vs. 6 days)**—enterprises rely on your work for million-dollar decisions daily
- **Build Cutting-Edge AI Infrastructure:** Work on **multi-agentic systems, RAG pipelines, LLM orchestration, text-to-SQL** at production scale serving **120+ category-defining brands**
- **Move at Warp Speed: $28.3K to $512.9K MRR in 7 months**—your ML models fuel **$300M+ revenue trajectory** and **aggressive global expansion**
- **Scale Technical Impact:** Optimize models serving **17+ industries, 90+ languages, 700+ integrations**—tackle interesting ML engineering challenges beyond typical CRUD apps
- **Get Rewarded:** Competitive compensation + equity in a **zero-churn** startup backed by tier-1 VCs + clear path to Senior AI/ML Engineer → AI Architect

What Winning Looks Like
Month 3: Deployed 2 production models, implemented monitoring infrastructure, contributed to MLOps pipeline improvements
Month 6: Achieved 95%+ model accuracy SLAs, optimized inference latency 30%, automated retraining pipelines for 3 models
Month 12: Owned 5+ production models, improved platform forecasting accuracy to 94%+, mentored junior engineers, promoted to Senior track

What We're Looking For (Honest Truth)
This isn't research ML—you'll deploy production systems with SLAs. This isn't pure engineering—you'll design and train models. It's production ML engineering where your work powers **causal chains and forecasting** enterprises depend on.
If you want to publish papers without production deployment, this isn't it.
If you want to build production ML infrastructure powering the world's best decision intelligence platform, deploy models serving **120+ brands**, and solve interesting ML engineering problems at a **zero-churn hypergrowth startup going global**, let's talk.

Career Path
AI/ML Engineer → Senior AI/ML Engineer → AI Architect → Director of AI Engineering

Core Values: Customer First | Execution Excellence | Act Like an Owner | Win Together
Vision: To build an agentic AI analytics universe that transforms reporting into diagnosis and insights into action.
Ready to build something real? Fire AI is an equal opportunity employer where your work speaks louder than your resume.
